## DETAILED ACTION

### ***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claim 16 is rejected under 35 U.S.C. 102(b) as being anticipated by U.S. Pat. No. 6,070,923 to Tanimoto.

Tanimoto '923 teaches an embodiment having all of Applicant's claim limitations including : a "release lever" - 5 with note to this Application's disclosure of part 14, an "inertia device" - including arm 9 as shown in Fig 9 for example, a "transmission path" - mechanical components between 5 and the pawl which act to release latch bolt when lever 5 is operated by hand, a "latch chassis" - one of ordinary skill in the art would recognize that the housing of the latch bolt (not shown) is inherent to teaching of the reference whereby teaching of the reference fully anticipates limitation since no particular structure or arrangement of the latch chassis is otherwise defined. It is apparent that after an inertial event is over, operation of the handle will again create/restore a transmission path for operating the latch.

### ***Allowable Subject Matter***

3. Claims 9-12 and 18, and 22-25 are allowed.

### ***Response to Arguments***

4. Applicant's arguments are not entirely persuasive as regards claim 16.

Applicant's conclusion that the handle, inertial device, etc. of the reference are not part of the vehicle door latch are not fully supported by citation of evidence, such as claim limitations, etc.. Inasmuch as the handle, inertial device, etc. are functionally and mechanically critical to operation of the vehicle door's latch bolt, one of ordinary skill in the art would consider them to read on the broad claim limitation which does not define a physical location or arrangement to differentiate from the physical location/arrangement disclosed by the prior art. In that respect, the claim does not define any particular structure that can be relied upon to patentably distinguish from the well known structure of the prior art. The law of anticipation requires that a distinction be made between the invention described or taught and the invention claimed. It does not require that the reference "teach" what the subject patent teaches. Assuming that a reference is properly "prior art," it is only necessary that the claims under consideration "read on" something disclosed in the reference, i.e., all limitations of the claim are found in the reference, or "fully met" by it. *Kalman v. Kimberly-Clark Corp.*, 218 USPQ 789. Claims in a pending application should be given their broadest reasonable interpretation. *In re Pearson*, 181 USPQ 641 (CCPA 1974).

***Conclusion***

5. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.
